

Acknowledgements

The present book is part of a course which is taught by the open universities of both The Netherlands (Open Universiteit) and the UK (Open University). The course has been developed by a joint course team from both universities.

Particular thanks go to the senior administrators and staff in both institutions who made EPIC possible by providing the necessary funding and administrative support to permit the venture to go ahead.

The editors wish to extend their thanks to the members of the course team and to the many others who have in some way or other contributed to the present book. Without wanting to seem ungrateful to those who contributed in small yet important ways, we would like to thank a number of people explicitly:

John Bennett, Dr John Blunden, Ron J.M. Cörvers, Dr Bernard Eccleston, Professor David Potter, Dr Alan Reddish, Varrie Scott, Paul Smith, Dr Peter Sloep, René van Veenhuizen, Dr John Wright, Anke H. van der Zijl for their services rendered as members of the core course team.

Professor Michael Redclift, the course's External Assessor, is thanked for his comments on and assessments of the course materials. Also, the services of the Tutor Panel (Fenella Butler, Mike Gordon, Gordon Jones and Miles Litvinoff) in the UK and Dr Wim Westera and the Student Testers in The Netherlands were invaluable and indispensable.

We further thank Miek A.M. Wierts-van Helden for logistics support, Ommo E. Smit for editing the manuscript and Tony Parr for his editing of the English language. Finally we must thank Evelin B.A. Karsten-Meessen for typing up the manuscript and all the secretaries who provided their services over the years.

This book, *Prospects for Environmental Change*, is volume three of the series Environmental Policy in an International Context. First published in 1996, it is part of the Open University course N.22.2.1.2.
