

Index

- acid rain in Europe, 4
- Actors and Factors method, 7
- adaptive management, 107
- African land use scenarios, 76–80
 - agricultural, 76, 77
 - drivers of, 77, 78, 80
 - forest, 76–79
- aggregation, 161, 163, 165
- anticipatory scenarios, 20
- archetype, 38, 39, 41, 45–49

- backcasting, 39, 45
- baseline scenarios *see* reference scenarios
- benchmark *see* reference scenarios

- climate change and scenarios, 2, 3, 5, 6
- climate scenarios, 5
- combining qualitative and quantitative scenarios, 25, 26
- criteria for evaluation of scenarios, 94

- downscaling, 154, 155, 158–161
- drivers of land use/cover scenarios, 71
- driving forces, 17, 139, *see also* drivers

- environmental scenario analysis, 3, 5–10
 - improving, 8, 9
 - two threads of, 6–10
- environmental scenarios, 13, 14, 16–22, 26, 33–35, 37, 38, 40–58, 152–166, 180–185
 - alternatives to, 19
 - baseline, 40
 - definition, 13, 14
 - dimensions, 42–45
 - environmental, 37, 38, 40, 41, 51–58
 - evaluation of, 33–35
 - global, 54, 55
 - goals, 17–19
 - guidelines for, 14
 - how many scenarios to develop, 26
 - integrative, 54–58
 - IPCC-SRES scenarios, 162
 - key elements of, 16
 - logic, 41, 42
 - methods for developing, 22
 - multi-scale scenario, 154, 159–162, 164, 165
 - participatory approaches for developing, 22
 - purposes, 180–185
 - qualitative–quantitative scenarios, 153, 157
 - regional, 55, 56
 - time horizon of, 17
 - topical, 51–54
 - types of, 19–22
- European Environment Agency, 49, 50, 52
- European land use scenarios, 78–82, 84, 85, 88
 - agricultural, 79–81
 - drivers of, 81, 84
 - Eururalis, 80, 82, 85, 88
 - forest, 80, 84
- exploratory scenarios, 20

- fuzzy sets for translation problem, 143–147

- GEO, 38, 40, 44, 50, 55–57
- GEO-4 scenarios, 126, 135, 136, 139
 - description of, 136
 - development of, 135, 136
 - origin of, 135
- global land use scenarios, 72–75, 91, 93
 - agricultural, 72–74
 - consequences for earth system, 93
 - differences from regional scenarios, 91
 - drivers of, 74, 75
 - forest, 73–75
 - urban, 73–75
- Global Scenarios Group, 45, 46, 48, 55
- Glowa–Jordan scenarios, 140, 143–145

- improving land scenarios, 94–97
 - and extreme events, 96
 - attention to non-ag land, 95
 - documentation, 97
 - expanding scope, 94
 - factors determining agricultural land, 95
 - feedbacks, 95
 - new details about driving forces, 95
 - transparency, 97

- inquiry-driven scenario analysis, 5, 7, 8
 advantages of, 8
 as a research tool, 5
 scientific acceptance of, 7
- interactive scenarios, 97, 98
- Intergovernmental Panel on Climate Change (IPCC), 4, 38, 42–44, 47, 50, 52, 53, *see also* SRES scenarios of Intergovernmental Panel on Climate Change
- intervention scenarios *see* reference scenarios
- limits to growth, 3
- Millennium Ecosystem Assessment, 3, 4, 43, 50, 54–56
- Millennium Ecosystem Assessment (MA) scenarios, 126, 131–135, 138–140
 description of, 134, 135
 development of, 132–134
 origin of, 131, 132
- Millennium Project, 49, 50, 55
- mitigation scenarios *see* reference scenarios
- modelling future land use and cover, 70
- models, modeling, 38, 39, 42, 49, 52, 54, 55
- multi-scale scenarios, 89–91, 98
- non-intervention scenarios *see* reference scenarios
- normative scenarios *see* anticipatory scenarios
- OECD, 38, 50, 56
- participatory approach to scenarios, 69, 96
- participatory scenario building, 105–110, 116, 117, 119, 120
 scenario planning, 105–110, 116, 117, 119, 120
 scenario workshops, 116
- policy scenarios, 21, 22
- pollution control scenarios *see* policy scenarios
- prescriptive scenarios *see* anticipatory scenarios
- qualitative scenarios, 22–25, 69, 124, 137, 147
 advantages of, 23, 69, 124, 147
 analytical approaches for developing, 25
 disadvantages of, 23, 69, 124
 participatory approaches for developing, 25
 scheme for classifying, 24
 steps for qualitative scenarios, 24
- quantification, 155, 158–160, 162, 164–166
- quantitative scenarios, 22–25, 69, 124, 125, 137, 148
 advantages of, 23, 69, 124, 125, 148
 disadvantages of, 23, 69, 124, 125
 participatory approaches for developing, 25
 scheme for classifying, 24
- reference scenarios, 20, 21
- regional acidification of the environment *see* acid rain in Europe
- regional and local scenarios, 82, 85–87
 and deforestation, 86, 87
 drivers of, 85
- SAS *see* Story and Simulation approach (SAS)
- scale, 151–166
 institutional scale, 163
 multiple scales, 153, 166
 spatial scale, 151–154, 164, 166
 temporal scale, 151, 153, 162–164
- scales in scenarios, 31–33
 methods for ensuring scale consistency, 32, 33
 reasons for addressing, 31
- scenario analysis, 16, 68
- scenario development, 16
- scenario exercise, 15
- scenarios *see* environmental scenarios
- scientific method and scenarios, 2, 8, 9
 need for reproducibility of scenarios, 8, 9
 need for scientific credibility of scenarios, 8
 need for transparency of scenarios, 8, 9
- social learning, 106–108, 117–120
 mental model, 106, 117–120
- SRES scenarios of Intergovernmental Panel on Climate Change, 126, 129–131, 139, 140
 description of, 130, 131
 development of, 130
 origin of, 129, 130
 storyline from, 131
- stakeholder analysis, 111
- stakeholder participation, 106, 110, 113–115, 117–120
 methods for stakeholder involvement, 114
 focus groups, 113, 115, 119
 group model building, 115, 117, 118, 120
 participatory agent based social simulation, 118
- stakeholder participation in scenarios, 26–28
- Story and Simulation approach (SAS), 69, 137–150
 advantages of, 140, 141
 drawbacks and solutions, 141–147
 conversion problem, 143–147
 reproducibility problem, 141–143
- driving forces, 139
- iteration in, 140
- overview, 138
- publication of scenarios, 140
- quantifying indicators, 139
- review, 140
- scenario panel, 137–140
- scenario team, 137–140
- storylines, 137–139

-
- storyline, 7, 69, 124, 128, 131, 137–139, 153–160, 162, 164–166
 - strategy-driven scenario analysis, 7, 8
 - advantages of, 8
 - deficiencies of, 7
 - goal of, 7
 - surprise, 29, 30, 171–180, 185–190
 - definition, 174–178
 - including in scenarios, 29, 30
 - methods for detecting, 185–190
 - typology, 171–174, 178–180
 - transparent, 156, 164, 166
 - uncertainty, 40, 42–45
 - upscaling, 161
 - urban scenarios, 88, 89
 - World Water Vision, 4, 5, 20, 126–129, 139
 - scenarios, 126–129, 139
 - description of, 128, 129
 - development of, 128, 129
 - origin of, 127
 - storyline from, 128
